Mr. Charles B. Lewis, III
Chief, CERCLA Pre-Remedial Division
Maryland Department of the Environment
2500 Broening Highway
Baltimore, Maryland 21224

Dear Mr. Lewis:

The purpose of this letter is to communicate to you the status of sites in Maryland that EPA has investigated through the FIT team. You should have received copies of each of these reports. This letter will inform you of EPA's intended action on each of these sites, which have had site inspections conducted on them. The actions discussed here are based on available information to date, and are of course subject to change if additional information becomes available.

Attached to this letter are lists of sites and their status. The first list is of those sites which have been recommended for further action. The second list consists of those sites that are not scheduled for further action by EPA, but that you may want to investigate for possible action under State authorities (i.e., those sites that have some contamination but few targets). The final list is of those sites that are scheduled for no further action.

If you have any questions on this matter, please call me at (215) 597-8229.

Sincerely,

Gregory Ham
Maryland Project Officer
